

Corporation Stops

1/2", 3/4", 1", 1 1/4", 1 1/2", and 2" sizes

Corporation Stops (or corp stops) are designed for injecting chemical solutions into mains, process systems, tanks, and cooling towers. The use of a corp stop is necessary for cleaning and maintenance in instances where the process water pipe cannot be drained at the diffuser. With a corporation stop, the diffuser can be removed while the process water pipe remains full and pressurized.

Available Sizes & Materials:

Standard Brass Body

Available Sizes: 3/4", 1", 1 1/2", 2"

Lead-Free Brass Body

Available Sizes: 3/4", 1", 1 1/2", 2"

Non-Metallic

Available Sizes: 1/2", 3/4", 1", 1 1/4", 1 1/2"

How does it work?

Chemicals are injected into the process water line away from the edge of the pipe. This process will not only allow for better chemical dilution, but will also decrease the chance of costly pipe corrosion.

All Corporation stops are equipped with a safety chain that is used to prevent the solution diffuser tube from blowing out due to the high process pressure.

Global Treat's corporation stops are available in a variety of sizes and materials and are compatible with an assortment of chemicals including Chlorine, Ammonia, Carbonic Acid, Sodium Hypochlorite, as well as many others.
